

Planning and Estimating on Projects

Assess the management talent in your
organisation

Overview

This one-day event is designed to develop the skills that will help create realistic plans and estimates that are essential for project success. The course covers all the essentials of converting the project objectives into workable plans supported by robust estimates. The course will look at how a wide range of tools and techniques can be applied to various project situations to produce optimum results.

Course duration

One day.

Course style

These courses are highly participative using exercises, case studies and practical work.

Pre-requisites

Some hands-on experience and involvement with projects or programmes is required.

Who should attend?

Project managers, project planners, programme and project office staff, work package managers and anyone who has to plan and estimate in a project environment.

Course objectives

Delegates will be able to:

- Understand planning and estimating in the context of a project life cycle.
- Understand why projects fail.
- Define the various levels of plans.
- Define the scope of a project using breakdown structures.
- Create a project network and calculate the critical path.
- Create a schedule.
- Define key milestones.
- Resource a schedule and resolve conflicts.
- Apply three-point estimating to the plan.
- Define and select suitable estimating techniques for a given situation.
- Understand the levels of accuracy required when estimating and the use of caveats.
- Model uncertainty and risk into the plan.
- Understand the human factors that can influence plans and estimate and apply suitable strategies to overcome problems.

Planning and Estimating on Projects

Raise your project management to the next
level
